

Pointwise Convolutions:

operation count: $W \times H \times D$
(multiplication)

3D Convolutions:

operation count: $(W-f+1)(H-f+1)(D-f+1)f^3$

Separable Convolutions:

operation count:
 $(n-f+1) \times (n-f+1) \times f^2$

$$\begin{matrix} n \\ \square \\ n \end{matrix} * \begin{matrix} f \\ \square \\ 1 \end{matrix} = \begin{matrix} \square \\ n-f+1 \end{matrix} * \begin{matrix} \square \\ f \end{matrix} 1$$

$$= \begin{matrix} \square \\ n-f+1 \\ n-f+1 \end{matrix}$$

Operation count: $(n-f+1) \times n \times f$
 $+ (n-f+1)^2 \times f$

Comparison: $\frac{\text{separable}}{\text{regular}} = \frac{(n-f+1) f (2n-f+1)}{(n-f+1)^2 f^2} = \frac{2n-f+1}{(n-f+1) f}$

Assuming $n \gg f$, $\frac{\text{separable}}{\text{regular}} \approx \frac{2}{f}$ ($f=3 \Rightarrow \frac{1}{3}$ reduction in computation)

Depthwise Separable Convolutions:

Standard Convolution: (Image processing)

$$\begin{matrix} W \\ \square \\ H \end{matrix} \begin{matrix} 3 \\ \square \\ 3 \end{matrix} * \begin{matrix} f \\ \square \\ f \end{matrix} \begin{matrix} N \\ \square \\ 3 \end{matrix} = \begin{matrix} \square \\ W-f+1 \\ H-f+1 \end{matrix} \begin{matrix} N \\ \square \\ 3 \end{matrix}$$

operation count: $(W-f+1)(H-f+1)N \times 3f^2$

Step-1 Depthwise Convolution:

$$\begin{matrix} W \\ \square \\ H \end{matrix} \begin{matrix} 3 \\ \square \\ 3 \end{matrix} * \begin{matrix} f \\ \square \\ f \end{matrix} \begin{matrix} 1 \\ \square \\ 1 \end{matrix} = \begin{matrix} \square \\ W-f+1 \\ H-f+1 \end{matrix} \begin{matrix} 3 \\ \square \\ 3 \end{matrix}$$

operation count: $3(W-f+1)(H-f+1)f^2$

like to choose ψ :

Pointwise Convolution:

operation Count: $3(W-f+1)(H-f+1)N$

Total operation Count: $3(W-f+1)(H-f+1)(f^2+N)$

$$\frac{\text{Depth Sep}}{\text{Regular}} = \frac{3(W-f+1)(H-f+1)(f^2+N)}{3(W-f+1)(H-f+1)f^2N} = \frac{1}{N} + \frac{1}{f^2}$$

$N=100, f=3 \Rightarrow \frac{1}{8}$ reduction in computation

Modified Depthwise Separable Convolutions:

operation count: $\frac{3N}{k}WH$

Step-2

*

=

bottleneck layer

operation count:

$$(W-f+1)(H-f+1)N \times \frac{f^2 N}{K}$$

Total operation count: (To simplify computation assume same padding for each step)

$$WH \times \left(\frac{3N}{K} + \frac{f^2 N^2}{K} \right) = \frac{WHN}{K} \left(3 + \frac{f^2 N}{K} \right)$$

Regular:

*

=

operation count:

$$WHN \times 3f^2$$

$$\frac{\text{Mod dep sep}}{\text{Regular}} = \frac{\frac{3 + \frac{f^2 N}{K}}{3f^2}}{1} = \frac{1}{Kf^2} + \frac{N}{3K}$$

XCEPTION :

299 x 299 x 3 image

If not mentioned
padding = 1 (=same)
After every Conv and
DepSepConv we do batch
normalization (not shown)

Conv 32, 3x3, padding = 1, stride = 2x2

$$\text{output size} = \left\lfloor \frac{299 - 3 + 2 \times 1}{2} + 1 \right\rfloor = 150$$

150 x 150 x 32

Relu

Conv 64, 3x3,

$$\text{output size} = 150 \times 150 \times 64$$

Relu

DepSepConv 128, 3x3

$$\text{output size} = 150 \times 150 \times 128$$

Relu

DepSepConv 128, 3x3

Maxpooling 3x3, stride=2x2

$$\text{output size} = \left\lfloor \frac{150 - 3 + 2 \times 1}{2} + 1 \right\rfloor = 75$$

75 x 75 x 128

$$\text{output size} = \left\lfloor \frac{150 - 1}{2} + 1 \right\rfloor = 75$$

75 x 75 x 128
